

Assignment

1. What are the differences between Native, Hybrid, and Cross-platform mobile application development, and when is each approach commonly used?

I think Native apps are only made for one platform like Android or iPhone.

2. What is the Flutter Ecosystem, and how does it help developers create modern mobile applications?

For me, the Flutter Ecosystem is all the tools and widgets that Flutter have. It helps developers make apps faster because they only need one code for Android and iOS.

3. What is the Software Development Life Cycle (SDLC), and why is it important in building successful applications?

Because SDLC is the process of making a software from planning until maintenance.

4. How do Flutter development practices and the SDLC work together in creating real-world mobile applications?

I think Flutter is use for building the app, while SDLC is the guide for every step of the project. Both of them help make the app work better and easier to manage.

5. Why should developers understand these concepts before starting an application project?

Because Developer must understand this concepts first so they know what tools and process to use. It can also help avoid problems and make the project easier to finish.
